

MEZ Step-Servo Series Drives

MEZ Series Step-Servo Drives is the perfect integration of servo control technology in digital stepping drive, it adopts typical three-loop control method (position loop, speed loop and current loop), compatible with the dual advantages of stepping and servo.

Features

◇ Multiple Control Modes

Pulse & Direction Control Mode、 Double Pulse Control Mode、 Automatic Run Under Control、 Continue Running、 Analog control

◇ Full Close-loop

Automatically adapt to a wide range of inertia and friction load changes, motor standard with 1000 line encoder.

◇ Low Calorific Value, High Efficiency

Adjust current in real time according to the load condition to minimize heating; At rest, the current is almost zero, no heat; Nearly 100% torque output capacity, in the most compact space to play the largest energy conversion, energy saving efficiency.

◇ Smooth And Precise

Excellent performance at high speed and low speed. At low speed, the motor runs smoothly, quietly, no jitter, low noise; Make the motor in running and at static positioning accurate.

◇ High-Speed Response

In the case of point-to-point fast positioning, it provides a large torque output, so that the system has a very high dynamic response.

◇ High Torque

The driver is always in full servo mode, the torque of the motor can be fully utilized by 100%, and the system design does not need to consider torque redundancy.

◇ Automatically Adjusts Parameters

Automatically adjust parameters according to motor model without manual setting.

Status Indicator

| LED codes | ERROR |
|-----------------|-------------------------------------|
| ● | The motor is running |
| ● ● | The motor is lying idle |
| ● ● ● | Excessive current |
| ● ● ● ● | The motor winding is open circuited |
| ● ● ● ● ● | The drive input over-voltage |
| ● ● ● ● ● ● | The drive input under-voltage |
| ● ● ● ● ● ● ● | Position out of tolerance alarm |
| ● ● ● ● ● ● ● ● | Detect encoder error |

Specification

| Specification | Range |
|------------------|---|
| Speed Range | Up to 3000RPM |
| Ambient Temp | 0°C-50°C |
| Ambient Humidity | 90%or less non-condensing |
| Shock | 60-300Hz/mm |
| Storage Temp | -20°C-75°C |
| Cooling Way | Natural cooling or forced cooling |
| Environment | Do not place it next to other heating equipment. Avoid places whit dust, oil mist,corrosive gas,high humidity and strong vibration. Combustible gases and conductive dust are prohibited. |

MEZ Step-Servo Serie

Feature

- ◆Voltage Range: MEZ-2D260:18-60VDC
MEZ-2D580:18-75VDC
MEZ-2D6120: 18-80VAC
- ◆Selectable Microstep: 16 Settings, Can be customized according to customer requirements
- ◆Signal Input: compatible with 5-24V, no external series resistance required
- ◆The Maximum Response Frequency 400KHz
- ◆The Highest Speed 3000rpm
- ◆External In Place And Alarm Output Port
- ◆DIP Switch Setting The Single/ Double Pulse
The Default Setting Is Pulse & Direction Control Mode
- ◆DIP Switch Setting The Pulse Delay, The Default Setting Is 40MS

Selection Guide

| Model | Current | Voltage | Recommended Motors | Dimensions | Selectable Microstep | Weight |
|------------|----------|----------|--------------------|-------------|----------------------|------------|
| MEZ-2D260 | 0.5-2.0A | 18-60VDC | 42 & smaller | 119*75.5*34 | 16 Settings | about 276g |
| MEZ-2D580 | 2.5-5.0A | 18-75VDC | 57, 60 | 119*75.5*34 | 16 Settings | about 276g |
| MEZ-2D6120 | 3.0-6.0A | 18-80VAC | 60, 86 | 119*75.5*34 | 16 Settings | about 297g |

Mechanical Dimension

Switch Selectable

Many configuration parameters of the drive can be set with a dip switch ON/OFF:

DIP Setting

| Microstep | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 5 | 10 | 20 | 25 | 40 | 50 | 100 | 200 |
|-----------|-----|-----|------|------|------|-------|-------|-------|------|------|------|------|------|-------|-------|-------|
| Pulse/RPM | 400 | 800 | 1600 | 3200 | 6400 | 12800 | 25600 | 51200 | 1000 | 2000 | 4000 | 5000 | 8000 | 10000 | 20000 | 40000 |
| SW1 | ON | OFF | ON | OFF | ON | OFF | ON | OFF | ON | OFF | ON | OFF | ON | OFF | ON | OFF |
| SW2 | ON | ON | OFF | OFF | ON | ON | OFF | OFF | ON | ON | OFF | OFF | ON | ON | OFF | OFF |
| SW3 | ON | ON | ON | ON | OFF | OFF | OFF | OFF | ON | ON | ON | ON | OFF | OFF | OFF | OFF |
| SW4 | ON | ON | ON | ON | ON | ON | ON | ON | OFF | OFF | OFF | OFF | OFF | OFF | OFF | OFF |

SW5 Motor Rotate Direction Setting : OFF=CW,ON=CCW

SW6 Single/ Double Pulse Setting : OFF=Pulse+Direction,ON=Double Pulse

SW7、SW8 The Drive Current Selection

| Model | 2D260 Current | 2.0A | 1.5A | 1.0A | 0.5A |
|-------------|----------------|------|------|------|------|
| DIP setting | 2D580 Current | 5.0A | 4.0A | 3.0A | 2.5A |
| | 2D6120 Current | 6.0A | 5.0A | 4.0A | 3.0A |
| | SW7 | ON | OFF | ON | OFF |
| | SW8 | ON | ON | OFF | OFF |

SW9、SW10 Pulse Delay Setting

| Pulse Delay(ms) | 0 | 4 | 20 | 40 |
|-----------------|----|-----|-----|-----|
| SW9 | ON | OFF | ON | OFF |
| SW10 | ON | ON | OFF | OFF |

The Pin Function Of Status LED

| Mark | Function | Interpret |
|--------|---|--|
| Status | The fault & voltage lamp | Refer to status indicator table on page 34 |
| PUL+ | Pulse signal photoelectric isolation positive end | Connected the signal, power supply, Input voltage 5V -24V |
| PUL- | Pulse signal photoelectric isolation of the negative end | Falling edge is effective, when the pulse changes from high to low, the motor takes one step. Step Pulse width>2.5μs |
| DIR+ | Input signal photoelectric isolation positive end | Connect the power supply, Input voltage 5V-24V |
| DIR- | When SW9=OFF, it is the direction control signal When SW9=ON, it is the reverse pulse signal | It used to change the motor steering Falling edge is effective, when the pulse changes from high to low, the motor takes one step. Step Pulse width>2.5μs |
| EN+ | Input signal photoelectric isolation positive end | Connect the signal, power supply, Input voltage 5V -24V |
| EN- | Motor release and alarm clearance signal | When the "Enable" signal is activated (low level), then turn off the motor coil current, the motor is lying idle and the fault alarm signal is cleared |
| ALM+ | The positive end of the alarm signal output | When the red LED flashes, the alarm signal is activated. ALM+ connect the pull resistor to the positive pole of the output power supply, ALM- connect the negative pole of the input power supply, and the maximum driving current is 10MA |
| ALM- | The negative end of the alarm signal output | |
| EX+ | Position Positive end of signal output | When the driver finishes the given pulse, the signal in place is valid (the output optical coupler is on). EX+ is connected with a pull resistor to the positive pole of the output power supply, and EX- is connected to the negative pole of the output current. The maximum driving current is 10MA |
| EX- | Position signal output negative end | |
| +5V | Encoder power supply alignment | Encoder power supply positive pole 5V |
| EGND | Encoder power supply ground | Encoder power supply negative pole 0V |
| PB+ | Encoder phase B input positive end | Connect to positive input of encoder channel B |
| PB- | Encoder phase B input negative end | Connect to negative input of encoder channel B |
| PA+ | Encoder phase A input positive end | Connect to positive input of encoder channel A |
| PA- | Encoder phase A input negative end | Connect to negative input of encoder channel A |
| V+ | Positive pole of driver power supply | Positive pole of driver power supply, DE42 : 18-60VDC ; DE57 : 18~75VDC ; DE86 : 18~80VAC |
| V- | Negative pole of driver power supply | Negative pole of driver power supply |
| A+ | Wiring diagram A+ | |
| A- | Wiring diagram A- | |
| B+ | Wiring diagram B+ | |
| B- | Wiring diagram B- | |
